- Slicer/Carving Knife x 1
- Utility Knife x 1
- Paring Knife x 1

Environment Friendly Material: Bamboo

Bamboo is the fastest growing woody plant on Earth. It grows one third faster than normal plants. Some of them can grow even up to 1 metre per day. The balance of oxygen and carbon dioxide in the atmosphere has been a concern for years. Bamboo is a reliable contributor of oxygen. This speedy growth characteristic is good for the re-greening of degraded areas and generates more oxygen than an equivalent amount of trees. It purifies the soil and the Earth's atmosphere. It abates light intensity from the sun and protects against ultraviolet rays. It is a helpful partner to our environmental protections.

Bamboo is an enduring natural resource which can be an appropriate substitute for wood. It is one of the strongest materials which is widely used in building and house ware. This material is stronger and harder than wood. Its tensile strength is 28,000 per square inch versus 23,000 for steel. A short growth cycle makes it multi-functional. There are over 1,000 species of bamboo on the Earth. It can be harvested in 3 to 5 years and faster than the softwoods in 10 to 20 years.

The use of bamboo would lower the speedy evaporation of our rainforest. Save our environment from today. Use durable bamboo product!!

* All Knife block set packed in a RECYCLABLE Kraft Corrugated Box
